

Increasing CR participation saves lives and money

How is your hospital doing?

Cardiac rehabilitation (CR) reduces hospital readmissions, mortality, and costs. Yet participation remains low, with fewer than 1 in 3 eligible patients participating.

In the new **Hospital CR Reports** developed by Million Hearts®, you can find your hospital's data on:

CR Enrollment

Percent of beneficiaries who attended ≥ 1 CR session within 365 days of the CR-qualifying event.

Time to CR Enrollment

Time in days from the CR-qualifying event index date to the first session.
